

G10 EoT1 Exam Chemistry Practice Questions

No.	Example	Page						
1.	Define these terms: <i>system, surroundings, open system, closed system, isolated system, thermal energy, chemical energy, potential energy, kinetic energy, law of conservation of energy.</i> Questions & Problems Section: Q 6.1	33						
2.	A pressure cooker is an example of which of the following? <div>a) Closed System</div> <div>b) Open System</div> <div>c) Isolated System</div> <div>d) None of the mentioned</div>	pdf						
3.	Example(s) of an open system is/are <table><tr><td>I</td><td>A human body that is alive and functioning</td></tr><tr><td>II</td><td>A coffee machine</td></tr><tr><td>III</td><td>A computer</td></tr></table> <div>A. I only</div> <div>B. II only</div> <div>C. III only</div> <div>D. I, II, and III</div>	I	A human body that is alive and functioning	II	A coffee machine	III	A computer	pdf
I	A human body that is alive and functioning							
II	A coffee machine							
III	A computer							
4.	Define the term: system, surroundings	pdf						
5.	Identify the system, surrounding and boundary in the diagram below. 	pdf						
6.	Energy that is due to the motion of an object is <div>A kinetic energy</div> <div>B. potential energy</div> <div>C. gravitational potential energy</div> <div>D. elastic potential energy</div>	pdf						
7.	The main difference between kinetic energy and potential energy is that _____. <div>A. kinetic energy involves position, and potential energy involves motion</div> <div>B kinetic energy involves motion, and potential energy involves position</div> <div>C. although both energies involve motion, only kinetic energy involves position</div> <div>D. although both energies involve position, only potential energy involves motion</div>	pdf						
8.	Define these terms: <i>thermochemistry, exothermic process, endothermic process.</i>	33						

	Questions & Problems Section: Q 6.7	
9.	Describe two exothermic processes and two endothermic processes. Questions & Problems Section: Q 6.9	33
10.	<p>For exothermic reactions, what is the heat of reaction?</p> <p>a) Positive <u>b) Negative</u> c) Zero d) Cannot Say</p> <p>$\Delta H = \ominus$ <u>why??</u> because energy released $H_p < H_r$ $\Delta H = H_p - H_r$ $= 2 - 3 = \ominus 1$</p>	pdf
11.	<p>What is kinetic energy?</p> <p><input type="radio"/> The energy that an object gains from some outer source.</p> <p><input type="radio"/> The energy that is released from an object.</p> <p><input type="radio"/> The energy that is created by water.</p> <p><input checked="" type="radio"/> The energy that an object possesses due to its motion.</p>	pdf
12.	<p>What is potential energy?</p> <p><input checked="" type="radio"/> The stored energy of an object because of its position or condition.</p> <p><input type="radio"/> The energy an object has due to its motion.</p> <p><input type="radio"/> The energy an object might have if it existed.</p> <p><input type="radio"/> All of these</p> <p>chemical energy</p>	pdf
13.	(a) Briefly describe Bohr's theory of the hydrogen atom and how it explains the appearance of an emission spectrum. Questions & Problems Section: Q 7.24	88
14.	(a) What is an energy level? Explain the difference between ground state and excited state. (b) What are emission spectra? How do line spectra differ from continuous spectra? Questions & Problems Section: Q 7.23	88
15.	On what law is the first law of thermodynamics based? Explain the sign conventions in the equation $\Delta U = q + w$. Questions & Problems Section: Q 6.11	33
16.	Explain the first law of thermodynamics.	pdf

17.	<p>List the types of electromagnetic radiation, starting with the radiation having the longest wavelength and ending with the radiation having the shortest wavelength.</p> <p>Questions & Problems Section: Q 7.3</p>	87
18.	<p>Gamma rays have very short wavelengths while microwaves have relatively long wavelengths. Compare the two types of radiation in terms of frequency and energy.</p> <p>a. Gamma rays have higher frequency and lower energy than microwaves.</p> <p>b. Gamma rays have higher frequency and higher energy than microwaves.</p> <p>c. Gamma rays have lower frequency and lower energy than microwaves.</p> <p>d. Gamma rays have lower frequency and higher energy than microwaves.</p>	pdf
19.	<p>A researcher is performing a photoelectric experiment in which she uses an ultraviolet radiation source and focuses its energy on a solid sample of aluminum.</p> <p>Gamma rays have very short wavelengths while microwaves have relatively long wavelengths. Compare the two types of radiation in terms of frequency and energy.</p> <p>A. Gamma rays have higher frequency and lower energy than microwaves.</p> <p>B. Gamma rays have higher frequency and higher energy than microwaves.</p> <p>C. Gamma rays have lower frequency and lower energy than microwaves.</p> <p>D. Gamma rays have lower frequency and higher energy than microwave.</p>	pdf
20.	<p>On what basis is the classification of electromagnetic waves done?</p> <p>a) Electromagnetic spectrum</p> <p>b) Electric field</p> <p>c) Magnetic field</p> <p>d) Propagation constant</p>	pdf
21.	<p>Pick out the correct increasing order of energy of electromagnetic waves from the following.</p> <p>a) $E_{\text{infrared}} < E_{\text{micro}} < E_{\text{visible}} < E_{\text{ultraviolet}} < E_{\text{gamma}}$</p> <p>b) $E_{\text{micro}} < E_{\text{infrared}} < E_{\text{visible}} < E_{\text{ultraviolet}} < E_{\text{gamma}}$</p> <p>c) $E_{\text{micro}} < E_{\text{infrared}} < E_{\text{visible}} < E_{\text{gamma}} < E_{\text{ultraviolet}}$</p> <p>d) $E_{\text{micro}} < E_{\text{infrared}} < E_{\text{ultraviolet}} < E_{\text{visible}} < E_{\text{gamma}}$</p>	pdf
22.	<p>Which of the following choices lists electromagnetic waves from lower to higher frequencies?</p> <p>a. radio waves, infrared light, microwaves</p> <p>b. ultraviolet light, infrared light, X rays</p> <p>c. infrared light, ultraviolet light, gamma rays</p> <p>d. visible light, microwaves, ultraviolet light</p>	pdf

23.	<p>Look carefully at the electromagnetic spectrum shown below paying attention to the wavelengths and frequencies indicated. The visible portion of the electromagnetic spectrum has been enlarged below the spectrum. Fill in the blanks with the correct colors from the visible spectrum according to their wavelength, frequency and energy.</p> 	pdf
24.	<p>What is a wave? Explain the following terms associated with waves: <i>wavelength, frequency, amplitude</i>. Questions & Problems Section: Q 7.1</p>	87
25.	<p>What are the units for wavelength and frequency of electromagnetic waves? What is the speed of light in meters per second and miles per hour? Questions & Problems Section: Q 7.2</p>	87
26.	<p>Which of these wavelengths will produce a wave with the lowest frequency?</p> <p>(A) $5.2 \times 10^2 \text{ nm}$ (B) $4.0 \times 10^{-6} \text{ m}$ (C) $3.5 \times 10^{-5} \text{ cm}$ (D) 1.3 \AA ($1 \text{ \AA} = 1 \times 10^{-10} \text{ m}$)</p>	pdf
27.	 <p>Which wave shown above has the highest energy?</p> <p>(A) Wave 1 (B) Wave 2 (C) Wave 3 (D) All have the same energy.</p>	pdf
28.	<p>A short-wavelength indicates that the frequency will be ____.</p> <p>a. Zero b. Lesser c. Higher d. None of the above options</p>	pdf
29.	<p>A clean metal surface is irradiated with light of three different wavelengths λ_1, λ_2, and λ_3. The kinetic energies of the ejected electrons are as follows: λ_1: $2.9 \times 10^{-20} \text{ J}$; λ_2: approximately zero; λ_3: $4.2 \times 10^{-19} \text{ J}$. Which light has the shortest wavelength and which has the longest wavelength? - A:</p> <p>Review of Concepts</p>	53

30.	<p>In a photoelectric experiment a student uses a light source whose frequency is greater than that needed to eject electrons from a certain metal. However, after continuously shining the light on the same area of the metal for a long period of time the student notices that the maximum kinetic energy of ejected electrons begins to decrease, even though the frequency of the light is held constant. How would you account for this behavior?</p> <p>Questions & Problems Section: Q 7.101</p>	91
31.	<p>Emission of electron from the surface of metal when radiation of appropriate frequency is allowed to incident on it is called :</p> <div> <div>1. Nuclear fission</div> <div>2. Compton effect</div> <div>3. Photoelectric effect</div> </div>	pdf
32.	<p>Which radiations will be most effective for the emission of electrons from a metallic surface?</p> <p>a) Microwaves b) X rays c) Ultraviolet d) Infrared</p>	pdf
33.	<p>A piece of silver of mass 362 g has a heat capacity of 85.7 J/°C. What is the specific heat of silver?</p> <p>Questions & Problems Section: Q 6.32</p>	34
34.	<p>A 6.22-kg piece of copper metal is heated from 20.5°C to 324.3°C. Calculate the heat absorbed (in kJ) by the metal.</p> <p>Questions & Problems Section: Q 6.33</p>	34
35.	<p>Consider this reaction:</p> $2\text{CH}_3\text{OH}(l) + 3\text{O}_2(g) \longrightarrow 4\text{H}_2\text{O}(l) + 2\text{CO}_2(g)$ $\Delta H = -1452.8 \text{ kJ/mol}$ <p>What is the value of ΔH if (a) the equation is multiplied throughout by 2, (b) the direction of the reaction is reversed so that the products become the reactants and vice versa, (c) water vapor instead of liquid water is formed as the product?</p> <p>Questions & Problems Section: Q 6.24</p>	34
36.	<p>Given the thermochemical equations:</p> $\text{Br}_2(l) + \text{F}_2(g) \longrightarrow 2\text{BrF}(g)$ $\Delta H^\circ = -188 \text{ kJ/mol}$ $\text{Br}_2(l) + 3\text{F}_2(g) \longrightarrow 2\text{BrF}_3(g)$ $\Delta H^\circ = -768 \text{ kJ/mol}$ <p>calculate the $\Delta H^\circ_{\text{rxn}}$ for the reaction $\text{BrF}(g) + \text{F}_2(g) \longrightarrow \text{BrF}_3(g)$</p> <p>Questions & Problems Section: Q 6.74</p>	36

37.	<p>(a) What is the wavelength (in nm) of light having a frequency of 8.6×10^{13} Hz? (b) What is the frequency (in Hz) of light having a wavelength of 566 nm?</p> <p>Questions & Problems Section: Q 7.7</p>	87
38.	<p>(a) What is the frequency of light having a wavelength of 456 nm? (b) What is the wavelength (in nm) of radiation having a frequency of 2.45×10^9 Hz? (This is the type of radiation used in microwave ovens.) - A:</p> <p>Questions & Problems Section: Q 7.8</p>	87
39.	<p>A beam of red light shining on a piece of gold metal for one second did not cause any electrons to be emitted from the metal. Which is the most probable reason?</p> <p>(A) The amplitude of the red light was too low.</p> <p>(B) The light was not shining on the piece of metal for a sufficient time period.</p> <p>(C) The red light had a wavelength that was too short to cause the photoelectric effect.</p> <p>(D) Red light does not have enough energy to remove an electron from the surface of gold.</p>	pdf
40.	<p>Light from a bulb is falling on a wooden table but no photo electrons are emitted as</p> <p><input type="radio"/> A. Work function of wood is less</p> <p><input type="radio"/> B. Work function of wood is more</p> <p><input type="radio"/> C. It depends on the frequency</p> <p><input type="radio"/> D. It is independent of work function</p>	pdf
41.	<p>50.0 mL of water cools from 100°C to 88°C. What is the correct description of the heat transfer? The specific heat capacity of water is 4.184 J/g·°C.</p> <p>(A) 600 joules are released</p> <p>(B) 600 joules are absorbed</p> <p>(C) 2510 joules are released</p> <p>(D) 2510 joules are absorbed</p>	pdf
42.	<p>6.23 Explain the meaning of this thermochemical equation:</p> $4\text{NH}_3(\text{g}) + 5\text{O}_2(\text{g}) \longrightarrow 4\text{NO}(\text{g}) + 6\text{H}_2\text{O}(\text{g})$ $\Delta H = -904 \text{ kJ/mol}$ <p>Questions & Problems Section: Q 6.23</p>	34
43.	<p>Calculate the standard enthalpy of formation for diamond, given that</p> $\text{C}(\text{graphite}) + \text{O}_2(\text{g}) \longrightarrow \text{CO}_2(\text{g})$ $\Delta H^\circ = -393.5 \text{ kJ/mol}$ $\text{C}(\text{diamond}) + \text{O}_2(\text{g}) \longrightarrow \text{CO}_2(\text{g})$ $\Delta H^\circ = -395.4 \text{ kJ/mol}$ <p>Questions & Problems Section: Q 6.101</p>	38

44.	<p>Calculate the standard enthalpy change for the reaction</p> $2\text{Al}(s) + \text{Fe}_2\text{O}_3(s) \longrightarrow 2\text{Fe}(s) + \text{Al}_2\text{O}_3(s)$ <p>given that ΔH°_f</p> $2\text{Al}(s) + \frac{3}{2}\text{O}_2(g) \longrightarrow \text{Al}_2\text{O}_3(s)$ $\Delta H^\circ_{\text{rxn}} = -1669.8 \text{ kJ/mol}$ $2\text{Fe}(s) + \frac{3}{2}\text{O}_2(g) \longrightarrow \text{Fe}_2\text{O}_3(s)$ $\Delta H^\circ_{\text{rxn}} = -822.2 \text{ kJ/mol}$ <p>Questions & Problems Section: Q 6.64</p>	36																																																																																																				
45.	<p>$2 \text{NO}_2 (g) \rightarrow \text{N}_2\text{O}_4 (g)$</p> <p>What is the standard enthalpy change, ΔH°, of the reaction represented above?</p> <p>The ΔH°_f of $\text{NO}_2 = 34 \text{ kJ mol}^{-1}$ and the ΔH°_f of $\text{N}_2\text{O}_4 = 9.7 \text{ kJ mol}^{-1}$</p> <p>(A) -24.3 kJ (B) -58.3 kJ (C) 24.3 kJ (D) 58.3 kJ</p>	pdf																																																																																																				
46.	<p>Calculate the heat of decomposition for this process at constant pressure and 25°C:</p> $\text{CaCO}_3(s) \longrightarrow \text{CaO}(s) + \text{CO}_2(g)$ <p>(Look up the standard enthalpy of formation of the reactant and products in Table 6.4.)</p> <table><tr><th colspan="4">Table 6.4 Standard Enthalpies of Formation of Some Inorganic Substances at 25°C</th></tr><tr><th>Substance</th><th>$\Delta H^\circ_f(\text{kJ/mol})$</th><th>Substance</th><th>$\Delta H^\circ_f(\text{kJ/mol})$</th></tr><tr><td>Ag(s)</td><td>0</td><td>$\text{H}_2\text{O}_2(l)$</td><td>-187.6</td></tr><tr><td>AgCl(s)</td><td>-127.0</td><td>$\text{Hg}(l)$</td><td>0</td></tr><tr><td>Al(s)</td><td>0</td><td>$\text{I}_2(s)$</td><td>0</td></tr><tr><td>$\text{Al}_2\text{O}_3(s)$</td><td>-1669.8</td><td>$\text{HBr}(g)$</td><td>-36.2</td></tr><tr><td>$\text{Br}_2(l)$</td><td>0</td><td>$\text{Mg}(s)$</td><td>0</td></tr><tr><td>$\text{HBr}(g)$</td><td>-36.2</td><td>$\text{MgO}(s)$</td><td>-601.8</td></tr><tr><td>C(graphite)</td><td>0</td><td>$\text{MgCO}_3(s)$</td><td>-1112.9</td></tr><tr><td>C(diamond)</td><td>1.90</td><td>$\text{N}_2(g)$</td><td>0</td></tr><tr><td>$\text{CO}(g)$</td><td>-110.5</td><td>$\text{NH}_3(g)$</td><td>-46.3</td></tr><tr><td>$\text{CO}_2(g)$</td><td>-393.5</td><td>$\text{NO}(g)$</td><td>90.4</td></tr><tr><td>Ca(s)</td><td>0</td><td>$\text{NO}_2(g)$</td><td>33.85</td></tr><tr><td>$\text{CaO}(s)$</td><td>-635.6</td><td>$\text{N}_2\text{O}(g)$</td><td>81.56</td></tr><tr><td>$\text{CaCO}_3(s)$</td><td>-1206.9</td><td>$\text{N}_2\text{O}_4(g)$</td><td>9.86</td></tr><tr><td>$\text{Cl}_2(g)$</td><td>0</td><td>$\text{O}_3(g)$</td><td>142.2</td></tr><tr><td>$\text{HCl}(g)$</td><td>-92.3</td><td>$\text{O}_2(g)$</td><td>0</td></tr><tr><td>Cu(s)</td><td>0</td><td>$\text{O}_3(g)$</td><td>142.2</td></tr><tr><td>$\text{CuO}(s)$</td><td>-155.2</td><td>S(rhombic)</td><td>0</td></tr><tr><td>$\text{F}_2(g)$</td><td>0</td><td>S(monoclinic)</td><td>0.30</td></tr><tr><td>$\text{HF}(g)$</td><td>-271.6</td><td>$\text{SO}_2(g)$</td><td>-296.1</td></tr><tr><td>$\text{H}_2(g)$</td><td>0</td><td>$\text{SO}_3(g)$</td><td>-395.2</td></tr><tr><td>$\text{H}_2\text{O}(l)$</td><td>-285.8</td><td>$\text{H}_2\text{S}(g)$</td><td>-20.15</td></tr><tr><td>$\text{H}_2\text{O}(g)$</td><td>-241.8</td><td>Zn(s)</td><td>0</td></tr><tr><td>$\text{H}_2\text{O}_2(l)$</td><td>-187.6</td><td>$\text{ZnO}(s)$</td><td>-348.0</td></tr></table> <p>Questions & Problems Section: Q 6.51</p>	Table 6.4 Standard Enthalpies of Formation of Some Inorganic Substances at 25°C				Substance	$\Delta H^\circ_f(\text{kJ/mol})$	Substance	$\Delta H^\circ_f(\text{kJ/mol})$	Ag(s)	0	$\text{H}_2\text{O}_2(l)$	-187.6	AgCl(s)	-127.0	$\text{Hg}(l)$	0	Al(s)	0	$\text{I}_2(s)$	0	$\text{Al}_2\text{O}_3(s)$	-1669.8	$\text{HBr}(g)$	-36.2	$\text{Br}_2(l)$	0	$\text{Mg}(s)$	0	$\text{HBr}(g)$	-36.2	$\text{MgO}(s)$	-601.8	C(graphite)	0	$\text{MgCO}_3(s)$	-1112.9	C(diamond)	1.90	$\text{N}_2(g)$	0	$\text{CO}(g)$	-110.5	$\text{NH}_3(g)$	-46.3	$\text{CO}_2(g)$	-393.5	$\text{NO}(g)$	90.4	Ca(s)	0	$\text{NO}_2(g)$	33.85	$\text{CaO}(s)$	-635.6	$\text{N}_2\text{O}(g)$	81.56	$\text{CaCO}_3(s)$	-1206.9	$\text{N}_2\text{O}_4(g)$	9.86	$\text{Cl}_2(g)$	0	$\text{O}_3(g)$	142.2	$\text{HCl}(g)$	-92.3	$\text{O}_2(g)$	0	Cu(s)	0	$\text{O}_3(g)$	142.2	$\text{CuO}(s)$	-155.2	S(rhombic)	0	$\text{F}_2(g)$	0	S(monoclinic)	0.30	$\text{HF}(g)$	-271.6	$\text{SO}_2(g)$	-296.1	$\text{H}_2(g)$	0	$\text{SO}_3(g)$	-395.2	$\text{H}_2\text{O}(l)$	-285.8	$\text{H}_2\text{S}(g)$	-20.15	$\text{H}_2\text{O}(g)$	-241.8	Zn(s)	0	$\text{H}_2\text{O}_2(l)$	-187.6	$\text{ZnO}(s)$	-348.0	35
